

American Heart Association®

Target: Aortic Stenosis™

Strategic Collaborators – Implementation Guide

American Heart Association®

Target: Aortic Stenosis™

About Target: Aortic Stenosis

The American Heart Association (AHA) has launched the **Target: Aortic Stenosis** initiative to help drive efforts for timely diagnosis, appropriate treatment and improved quality of care by:

- Raising awareness and understanding of aortic stenosis signs and symptoms
- Positively empowering people to better manage their risks and self-management with patient and caregiver resources

By integrating **Target: Aortic Stenosis** into your communities or health care outreach efforts, you are helping to bring awareness to the risks and the forefront of heart-health conversations, supporting people with aortic stenosis, their loved ones, and clinical teams in their efforts to identify at-risk patients and coordinate care plans to improve health outcomes.

Edwards

Edwards Lifesciences is the national sponsor of American Heart Association's Target: Aortic Stenosis.

American Heart Association®

Target: Aortic Stenosis™

Target: Aortic Stenosis Strategic Collaborators

This guide is intended to elevate the efforts across the country through awareness and shared tools used by the Target: Aortic Stenosis Strategic Collaborators. Thank you.

WITHIN THIS GUIDE YOU WILL FIND

- Overview of why this matters
- How your organization can support the initiative
- Resources for patients & caregivers
- Messaging to reach patients/consumers & caregivers
- Resources for health care professionals
- Messaging for health care professionals

American Heart Association®

Target: Aortic Stenosis™

Why This Matters

- Aortic stenosis (AS) is one of the most common and serious valve disease problems.
- It affects about 5% of people 65 years and older. That number is expected to more than double by 2050, particularly among those 70 years and older.
- Often, people with aortic stenosis think the symptoms they are experiencing are a part of aging and do not get the medical attention they need to monitor and treat the condition.
- If left undiagnosed and untreated, AS can become more severe and potentially lead to heart failure and death.
- People with aortic stenosis may not experience noticeable symptoms until the narrowed valve greatly reduces blood flow.
- Aortic stenosis can be treated, and managing it appropriately can reduce the negative impact on quality of life.
- If there are no symptoms or if symptoms are mild, the best course of action could be regular follow up and monitoring to see if the valve opening has narrowed or if symptoms develop or worsen.

HOW YOUR ORGANIZATION CAN HELP SUPPORT: CAMPAIGN IMPLEMENTATION

Following are examples of how your organization can leverage the resources provided and elevate the voice and impact of the **Target: Aortic Stenosis** campaign.

American Heart Association®

Target: Aortic Stenosis™

Activate your Social Media Channels

- Share provided content across your social media platforms and encourage reposts and retweets (Facebook, Instagram, LinkedIn, Twitter).
- Follow the American Heart Association social media handles and engage (like, comment, repost/retweet campaign messages).
AHA: [Facebook](#) (@AmericanHeart), [Twitter](#) (@American_Heart), [Instagram](#) (@American_Heart) + [LinkedIn](#) (American Heart Association)
- Sample messages and graphics are included in this toolkit.

American Heart Association®

Target: Aortic Stenosis™

Leverage E-newsletters and Other Digital/Print Communications Tools

- Integrate campaign messaging and calls-to-action into your e-mail or print newsletters, magazines, etc.
- Link to the campaign resources on your organization's website.

Build a Messaging Calendar with Additional Touchpoints to Drive the Conversation

- February – American Heart Month
- February 22 – Heart Valve Disease Awareness Day
- November – Caregiver Month

Engage Your Conference/Community Event Audiences

- Distribute patient and health care professional resources at applicable events.
- Invite your patient audiences to download the discussion guide and symptom tracker and watch the patient video series.
- Invite your health care professional audience to review/utilize the patient education resources and professional education resources and webinars.

CAMPAIGN RESOURCES

FOR PATIENTS AND HEALTH CARE PROFESSIONALS

At your fingertips, we've provided a repository of materials to educate patients and health care professionals. Organizations can use any or all resources to support the campaign.

Learn about Aortic Stenosis

Aortic stenosis is one of the most common and serious valve disease problems

Fact Sheet: Aortic Stenosis

MORE THAN 13% of Americans 75 and older have aortic stenosis.

- Common in people over age 65.
- Untreated, it can lead to heart failure and death.

Understanding Aortic Stenosis

Target: Aortic Stenosis

Video: What is Aortic Stenosis?

Aortic Stenosis Fact Sheets

Aortic Stenosis

Aortic stenosis is one of the most common and serious valve disease problems. The heart pumps blood through the aortic valve to the body. Over time, calcium buildup can narrow the valve opening and restrict blood flow from the heart to the body.

Stenosis means narrowing. It makes the heart work harder and can cause:

- Fatigue
- Shortness of breath
- Chest pain
- Rapid fluttering heartbeat

MORE THAN 13% of Americans 75 and older have aortic stenosis.

- Common in people over age 65
- Untreated, it can lead to heart failure and death.

Early treatment is key to preventing heart failure.

- For mild or no symptoms, see your health care professional regularly and maintain a healthy lifestyle. Your health care professional may recommend avoiding overly stressful exercise.

Plus Your health care professional may recommend medication for:

- Lower your blood pressure
- Reduce your cholesterol

Visit heart.org/AorticStenosis for more information

PATIENT/PROVIDER Discussion Guide

Be prepared to get the most out of your appointment.

- Learn as much as you can about your condition.
- Write down questions to ask your doctor.

Aortic stenosis is a common condition that occurs when the opening to the heart valve narrows, usually due to age.

The hardened valve opening restricts proper blood flow to the heart. This can produce symptoms such as fatigue, dizziness, shortness of breath and chest pain.

Untreated, symptoms can worsen, leading to heart failure and possibly death.

It's important to seek treatment as soon as possible.

There is no cure for aortic stenosis. But you can manage early symptoms with medication and a healthy lifestyle. When the symptoms become severe or your heart function declines, your doctor may recommend replacing the damaged valve.

At your appointment:

- Your doctor will ask about your symptoms. How long have you had them? Have they gotten worse? Do they interfere with daily living? Download our symptom tracker [here](#).
- Be prepared to discuss any family history of heart disease.
- Your blood work and vital signs will be checked.
- Your doctor may order images of your heart, or an echocardiogram, to examine the condition of the valve.
- Medication may be recommended.
- Your doctor may discuss valve replacement procedures with you.

Understanding Aortic Stenosis

Aortic Valve Stenosis
Aortic valve stenosis, or aortic stenosis, is one of the most common and serious heart valve conditions. It is sometimes referred to as a failing heart valve.

What does the aortic valve do?
The aorta is the main artery that carries blood from the heart to the rest of the body. The aortic valve opens to allow blood to leave the heart and closes to prevent backflow of blood from the aorta into a lower heart chamber called the left ventricle.

What is stenosis?
Stenosis describes narrowing of an opening in the body. In the aortic valve, this narrowing restricts blood flow from the left ventricle. It also might affect pressure in an upper chamber, the left atrium.

In Young and Old
Aortic stenosis can occur at an early age due to a heart defect at birth called a bicuspid aortic valve. Or sometimes, the valve opening doesn't grow as the heart does.

The condition also can arise in people who had rheumatic fever in childhood. Rheumatic fever can inflame and scar the heart valves.

Possible Danger Ahead
A narrowed aortic valve can force the heart to work harder to pump blood into the aorta. This may cause thickening of the muscle in the left ventricle.

The thickening reduces the capacity of the ventricle. This can lead to heart failure, meaning the heart can't pump well enough to give the body all the oxygen-rich blood it needs.

Early treatment is key to preventing heart failure.

MORE THAN 13% of Americans AGES 75 AND OLDER have aortic stenosis.

Target: Aortic Stenosis™

Follow the guidelines to treat aortic stenosis

[Valvular Guidelines](#) [For More Information](#)

Aortic stenosis is one of the most common and serious heart valve disease problems. However, many patients are unaware or undiagnosed, which is why the American Heart Association continues to drive efforts for timely diagnosis, appropriate treatment, improved quality of care initiatives and comprehensive patient and caregiver resources to combat the disease.

To tackle the problem, we have launched Target: Aortic Stenosis. The goal of the Target: Aortic Stenosis program is to enhance the patient experience from symptom onset to appropriate diagnosis and follow-through, to timely treatment and disease management. The program consists of evidence-based measurement development to better identify and treat patients, as well as multi-media educational resources and self-management care plans for people living with structural heart disease.
